

WHAT'S ON YOUR MIND REGARDING POST-OP PAIN RELIEF?

We can be a resource for you

October 2014 Newsletter

Recently, RegenesiS Biomedical appointed me to expand the clinical understanding and utility of electromagnetic energy for post-op pain relief. Patients in persistent pain may benefit from Provant Therapy, as a non-narcotic option.

Provant use has expanded to include multiple clinical specialties. The knowledge you've gained is invaluable as we expand our clinical and educational programs.

At RegenesiS, we have embarked on a clinical trial program to formally demonstrate the outcomes you see in practice every day. In August, we reported on our failed back surgery trial results here: <http://bit.ly/1nnxcPT> And we've begun enrolling in a total knee arthroplasty trial. Stay tuned for results in mid-2015.

What's on your mind? Do you have thoughts on what we should study clinically? Any exceptional results you've had, that we should consider designing a trial around? Any ideas for changes to the Provant device? We'd like to hear from you. You may reach me at patti.smith@regenesisbio.com

To learn more about Provant and our support, please contact your local RegenesiS representative, or visit www.regenesisbio.com

Sincerely,
