

## DO YOU KNOW ABOUT THESE RESOURCES FOR YOU?

### Easy ways to learn more about Safe, Non-Drug Pain Management

October 2015 Newsletter

Frequently there are media reports about the use of prescription opioids for pain relief, and the associated side effects such as nausea, sleepiness, constipation, and addiction. Opioids do have a role in pain management; however, complementary treatments may help these patients in need.

Provant Therapy continues to increase in use, because it's an effective, safe, non-drug option. Several resources are available for you to learn more about how this therapy may benefit your patients, and to learn the latest news on pain management.

- The body of evidence for Provant is located [here](#) and includes articles and case reports for several different pain etiologies
- An animated video on Provant's mechanism of action explains its anti-nociceptive analgesia and anti-inflammatory effects; you may view it [here](#)
- If you have colleagues that would like to receive these monthly newsletters, please forward this email to them; they may subscribe by emailing us at [newsletter@regenesisbio.com](mailto:newsletter@regenesisbio.com).
- You may sign up [here](#) for a free subscription to *Practical Pain Management*, written by experts and thought leaders in the field

Over 11,500 patients have treated with Provant's safe, non-drug pain management system. To learn more, please contact your RegenesiS representative, or visit [www.regenesisbio.com](http://www.regenesisbio.com).

Sincerely,

Adrienne (Patti) Smith, MD  
Vice President, Clinical Business and Medical Affairs
