

PAIN MANAGEMENT ALTERNATIVES TO DELAY OPIOID USE

Multimodal pain management techniques can help reduce complications associated with opioids

November 2016 Newsletter

In a recent issue of U.S. Medicine, a key article focused on the Department of Veteran Affairs' Opioid Safety Initiative. Until recently, most attention was on non-narcotic alternatives for chronic pain. More emphasis is now being placed on delaying and reducing the need for opioids for pain related to diseases, after trauma, and after surgery. Multimodal pain management techniques harness the synergistic action of multiple agents. This approach may help patients avoid complications associated with opioids, such as delayed recovery, hypoventilation, nausea, vomiting, urinary retention, itching, constipation, dizziness and confusion.

You may find the complete article [here](#).

Provant Therapy from RegenesiS Biomedical Inc. is a safe, non-drug pain management option to consider. Over 13,000 patients have treated with Provant. To learn more, please contact your RegenesiS representative, or visit www.regenesiSbio.com. If you have colleagues that would like to receive these monthly newsletters, please forward this email to them; they may subscribe by emailing us at newsletter@regenesiSbio.com.
