

FOR ADVANCED PAIN RELIEF, ENERGETICS MATTER

Provant[®] Therapy is electromagnetic energy. Tested and proven settings provide safe, non-drug pain management

May 2017 Newsletter

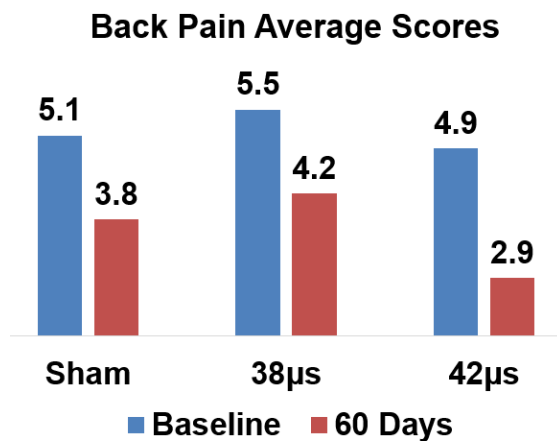

Provant's settings were determined based upon laboratory research. The RegenesiS Life Science Lab researches the effect of electromagnetic energy on human cells in culture. A key conclusion is that different energetic settings have different effects.

Provant's settings are proven to reduce pain in a clinical trial

The results of a randomized, controlled clinical trial show Provant's settings are effective in relieving pain. Subjects were enrolled after lumbar surgery in one of three arms: Inactive Sham, experimental 38 μ s pulse width setting, or current Provant 42 μ s pulse width setting. The primary endpoint was percent reduction in pain score on the 11-point scale. The trial's key finding is that settings make a difference in outcomes: Provant's 42 μ s setting resulted in a clinically meaningful reduction in pain, whereas the 38 μ s setting performed no better than sham.
