

MEDICAL TECHNOLOGY HELPS RELIEVE PAIN AND CAN HELP FIGHT THE OPIOID EPIDEMIC

Pain is more common than diabetes, heart disease, and cancer *combined*

March 2018 News Update

Cases of chronic pain are the leading cause of long-term disability. Pain affects mental and emotional well-being, impacting a person's ability to work and quality of life. More than 650,000 prescriptions for opioids are filled each day in the U.S. to help relieve pain.

The Advanced Medical Technology Association (AdvaMed) recently published a fact sheet presenting approaches to treating acute pain and managing chronic pain. Pulsed Electromagnetic Field (PEMF) Therapy was highlighted as an option to consider. Provant Therapy® by RegenesiS Biomedical is high-energy, dual-field PEMF therapy. Provant treatment is non-invasive and typically sensation-free. Patients typically self-treat at home.

COMBATting AMERICA'S OPIOID EPIDEMIC WITH MEDICAL TECHNOLOGY
