

# IMPROVED SLEEP AND QUALITY OF LIFE: RELIEF OF CHRONIC BACK PAIN AFTER MOTOR VEHICLE ACCIDENT

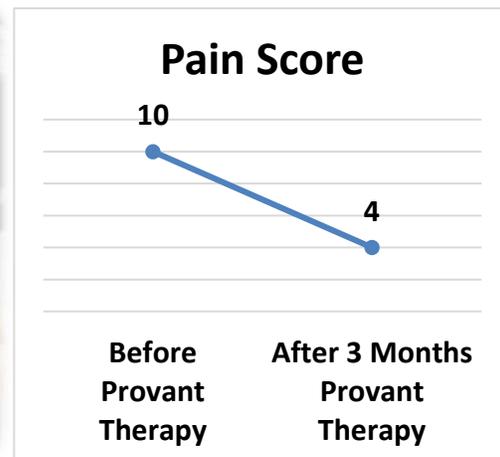

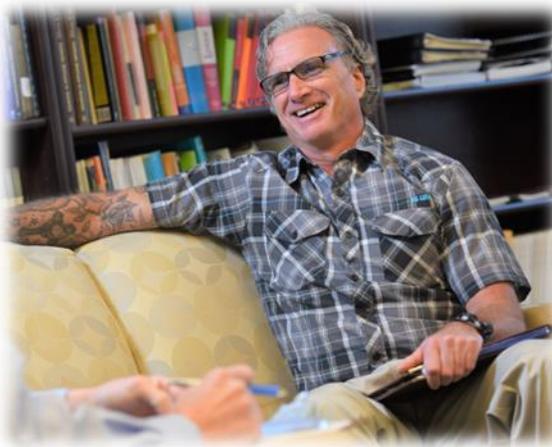

## A Navy Electronics Technician's Relief from Chronic Pain

April 2019 News Update

A patient's experience: Mr. Matthew Morris. United States Navy, Disabled.

"I am a Service-Connected Disabled Veteran. During care as a result of a motor vehicle accident, I was diagnosed with cervical degenerative disc and joint disease, intervertebral disc syndrome, osteoarthritis of the spine, nerve root compression syndrome, myofascial pain syndrome, chronic pain syndrome, and spinal fracture at T11 and T12 vertebrae. Also I have lumbosacral spondylosis, and radiculopathy in both legs. Physical therapy and pain killers were prescribed, and I've had lumbar facet joint injections and RF ablations. The pills led me to a life of alcoholism and chemical dependency. An H-Wave<sup>®</sup> TENS unit was prescribed, but it did not provide relief of my deep-seated pain.

Today I have constant chronic pain through my lumbar spine on the right side of my lower back and into my hip. Also, I have acute episodes...flair ups. When I received the Provant Therapy device, I began using it every morning and night. My pain would subside after treatments. It continues to give me a level of immediate relief. In conjunction with facet joint injections, once-a-day meloxicam, and physical therapy, my overall function is improved. And I'm able to fall asleep at night."

For postoperative pain relief, consider Provant Therapy. Provant is dual-field electromagnetic therapy, proven in clinical trials and real-world patient experiences to provide meaningful pain relief and improved quality of life. To learn more about Provant Therapy, please contact your RegenesiS Biomedical representative, or visit [www.regenesibio.com](http://www.regenesibio.com).
