

## SUMMITING MOUNTAINS OF ROCK AND MOUNTAINS OF PAIN: LEIF WHITTAKER'S STORY

**Leif Whittaker is no stranger to obstacles. He climbed to the summit of Mount Everest *twice*. Overcoming pain with Provant Therapy<sup>®</sup> allows him to remain active.**

June 2019 News Update

Leif Whittaker is no stranger to obstacles. He's traversed icy glaciers, hiked rough terrain, and even climbed to the summit of Mount Everest twice. It's in his blood and part of his heritage.

He visited the Himalayas in 2003, where he saw Everest for the first time. "It changed my perspective, seeing it for the first time, the mountain I'd heard so much about my entire life," said Leif. "It made me want to go back there, and seven years later, I had my first chance to climb it."

Leif knew he'd need to prepare for plenty of physical dangers on Mount Everest: severe weather conditions, avalanches, and extreme altitude. But first, he had to face his own physical battle with back pain that started in college, and then a sporting accident left him with a ruptured disc. About five years after his second trip up Everest, his pain turned chronic.

Faced with this new painful reality, Leif connected with a team of medtech innovators who posed a solution to his problem: Provant Therapy. "It sounded like they designed it for exactly what I was going through. I've been using the device for four months, and it's incredible how it's taken my

chronic pain away,” said Leif. “I was skeptical going into it – I didn’t want to get my hopes up for a miracle cure – but, I’ve been amazed by how effective it’s been.”

You may read Leif’s complete story [here](#). It’s part of AdvaMed’s *Life Changing Innovation* initiative. More about AdvaMed [here](#).

For postoperative pain relief, consider Provant® Therapy. Provant is dual-field electromagnetic therapy, proven in clinical trials and real-world patient experiences to provide meaningful pain relief and improved quality of life.
