

KOREA WAR VETERAN'S BACK PAIN RELIEF WITH PROVANT[®] THERAPY

After Failed TENS and Multiple Injections

July 2019 News Update

A U.S. Army retired Quartermaster suffered from 20+ years of post-operative back pain. His overall quality of life was complicated by unbearable numbness on calves and feet due to neuropathy. Surgery was performed on five toes, including toenail extractions. Injections for lower back pain and locking hips, and multiple TENS treatment attempts, failed to provide pain relief.

His lower back pain was 8/10. The patient stated “nothing seemed to help”. A Physical Therapy consult led to treatment with Provant Therapy for 120 days. Provant[®] Therapy provided lower back pain relief, helped return lower extremity sensation, and improved muscle strength lasting two years. The patient is restarting treatments to once again achieve lasting relief.

	Before Provant	After Provant
Pain Meds	Ibuprofen	None
Pain Score 0-10	8/10	5/10 then 0-1/10
Quality of Life	<ul style="list-style-type: none"> • Difficulty walking short distances. • Poor sleep. 	<ul style="list-style-type: none"> • Able to walk longer distances. • Better sleeping patterns.

For postoperative pain relief, consider Provant[®] Therapy. Provant is dual-field electromagnetic therapy, proven in clinical trials and real-world patient experiences to provide meaningful pain relief and improved quality of life.
