

December 2019 News Update

RETURN TO FAMILY ACTIVITIES AFTER RESOLUTION OF PAIN FROM DEGENERATIVE DISC DISEASE AND SPINAL STENOSIS

Case Report: Improved range of motion, more mobility, less stressed and gets through a workday with ease.

Patient Details:

- 51 year old male.
- Persistent pain from disc disease and stenosis.
- Impaired quality of life, including sleep, bending, and family activities.

Interventions and Outcome:

- Caudal steroid injection.
- Tried “everything known to man” to help his pain.
- Pain remained 7/10.
- He is an avid SCUBA diver and was ready to give it up.
- Tossed and turned at night and did not feel rested in the morning.
- Led a very sedentary life. Depressed.

Alternative Pain Relief Intervention:

- One month after the steroid injection Provant Therapy was prescribed.
- His pain dropped during 7 months of treatment, to 2/10.
- Improved range of motion, more mobility, less stressed and gets through a workday with ease.

Conclusions:

After intervention with Provant Therapy:

- Persistent pain of 7/10 reduced to 2/10.
- Able to resume an active life including scuba diving.
- Able to sleep through the night.
- Resumed activities with his family.
- No longer depressed.

	Before Provant	After Provant
Pain Score 0-10	7/10	2/10
Quality of Life	<ul style="list-style-type: none"> • Slowed down lifestyle. • Did not sleep well. • Could not get comfortable. 	<ul style="list-style-type: none"> • Returned to SCUBA diving with his family. • Sleeps through the night.
