

PAIN RELIEF FROM LUMBAR FUSION

Case Report: Improved Sleep, a More Active Life, and No Longer Using an Electric Cart

Patient Details:

- 64-year-old male.
- Lumbar fusion.
- 13-year history of lower back pain after surgery.
- Pain 7/10.
- Issues with sleep, daily activities, range of motion, and mood.

Interventions and Outcome:

- Several modalities were tried for pain relief without success.
- Became sedentary and unable to enjoy life.
- Became irritable, testy, and depressed.

Alternative Pain Relief Intervention:

- Provant Therapy prescribed 13 years post-operative after his fusion surgery.
- After 10 days his pain dropped to 4/10.
- At month 2 his pain was 2/10 which lasted through discharge after 5 months.

Conclusions:

After intervention with Provant Therapy:

- Quality of life returned, especially sleep, mood, and daily activities.
- Able to walk for extended periods and enjoy social activities.

	Before Provant	After Provant
Pain Score 0-10	7/10	2/10
Quality of Life	<ul style="list-style-type: none"> • Did not sleep well. • Used a walker, and electric carts in stores. • Would spend entire days sitting in a chair. 	<ul style="list-style-type: none"> • Can now sleep in a bed. • Can walk around entire stores. • Went to the county fair after missing it for years.
