

PAIN REMAINED RESOLVED AT TWO-YEAR POINT, AFTER PROVANT THERAPY FOR ANKLE SURGERY PAIN

Case Report: Lasting relief. Regained mobility. No more pain medication.

Patient Details:

- 53-year-old female. Licensed Practical Nurse.
- Persistent pain from surgery with hardware to repair a bimalleolar fracture.
- Impaired quality of life: Could not wear shoes due to swelling and unable to walk without crutches.
- At four months post-op pain was 6/10 while sitting; unbearable pain while walking.

Interventions and Outcome:

- Pain limited her ability to participate in physical therapy.
- For the first month after surgery she took 7.5mg hydrocodone 3 times per day.
- At month four she took hydrocodone at night PRN, plus over-the-counter medications.

Alternative Pain Relief Intervention:

- Provant Therapy was started four months post-op.
- Her pain decreased from 6/10 to 3/10 after the first treatment, 2/10 after two weeks, and 0/10 after 6 weeks.
- Two years after Provant was discontinued, her pain remains 0/10 and she is still off pain medications.

Conclusions:

- Lasting pain relief was achieved for this patient.
- Mobility is back to normal.

	Before Provant	After Provant
Pain Score 0-10	<ul style="list-style-type: none"> • 6/10 while seated. • Unbearable while walking with crutches. 	0/10
Pain Meds	<ul style="list-style-type: none"> • Hydrocodone at night PRN. • OTC pain meds PRN. 	<ul style="list-style-type: none"> • No pain meds
Quality of Life	<ul style="list-style-type: none"> • Unable to fully participate in physical therapy. • Recovery not progressing. 	<ul style="list-style-type: none"> • Lasting pain relief. • Mobility back to normal.
