

BACK PAIN RELIEF WITH PROVANT[®] THERAPY AFTER FAILED TENS AND MULTIPLE INJECTIONS

Case Report: Military Veteran's Improved Quality of Life with Provant[®] Therapy

August 2019 News Update

Patient Details:

- Navy, Air Force, and Army National Guard Veteran.
- 74-year-old male with long-term back pain due to military injuries.
- Used a walking cane for mobility.

Interventions and Outcome:

- No relief from TENS, traction, and epidural injections.
- Allergic to TENS electrode pad adhesives, including hypoallergenic pads.
- Gabapentin and OxyContin were prescribed; no meaningful relief and side effects not tolerated.

Alternative Pain Relief Intervention:

- Primary Care referred the patient to Physical Therapy, where an in-clinic "Provant Trial" proved successful.
- Provant Therapy was prescribed for home use, for two 120-day periods over the course of a year.
- Pain dropped from 10/10 to 2/10 then 0/10.

Conclusions:

- Quality of life improved after two 120 days of at-home treatments.
- Walking longer distances "without a cane, NO MORE back pain!"

	Before Provant	After Provant
Pain Meds	<ul style="list-style-type: none"> • Gabapentin. • OxyContin. 	None.
Pain Score 0-10	10/10	2/10 then 0/10
Quality of Life	<ul style="list-style-type: none"> • Difficulty walking with a cane. 	<ul style="list-style-type: none"> • Walking longer distances "without a cane, NO MORE back pain!"
